

OceanSafe

OceanSafe for [Your Hotel]

A free, co-branded beach-safety and conditions guide for your guests — opened from a QR code in the room. No app to download, nothing for your team to install.

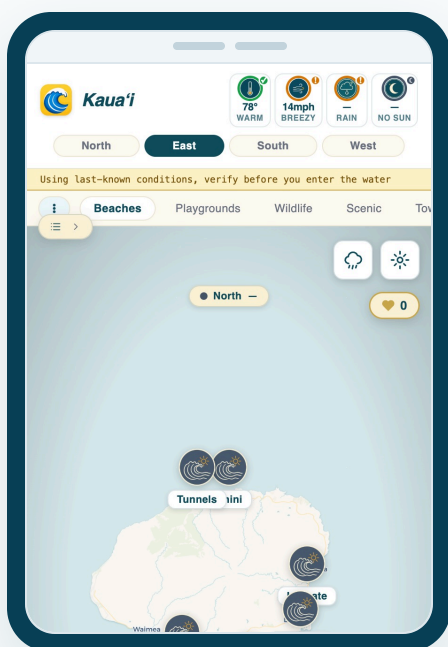

Information, not advice

Free 30-day pilot

THE GUEST AMENITY

A guest amenity that lives on their phone

→ scan → opens

Left: guest app home, co-branded for your property. Right: the in-room QR placard guests scan.

What it is

OceanSafe is a web guide your guests open by scanning a QR code in the room — beaches, current hazards, trails, places to eat, and a simple trip planner, all co-branded with your property. There is nothing to download and nothing for your team to run.

It is a web page, so there is no app store, no SDK, and no connection to your PMS. Your IT lift is zero: you place the placards, we handle the rest.

How guests reach it

-  Scan the in-room QR
-  Opens instantly in the browser
-  Co-branded as your amenity

 **Information, not advice.** OceanSafe shares conditions and safety awareness, not instructions. It always points guests back to lifeguards, posted flags, and official advisories, and it never claims a beach is safe. That honest framing is deliberate — it is the reason the guide belongs in a guest room.

THE CONDITIONS CALENDAR

The ocean has an off-switch

OceanSafe reads the real conditions along your shore — surf height, wind, rain, brown-water runoff from USGS stream gauges, and UV — refreshed roughly every 30 minutes. From that it counts **trigger days**: the days when the water is simply the wrong call for most guests. They are not rare, and they are not random.

A typical year on a north-facing shore

 365
days

~112/yr

North Shore

Big winter swell and frequent runoff.

60–80/yr

South Shore

Summer south swells and afternoon wind.

50–70/yr

East Side

Trade-wind chop and brown water after rain.

Typical ranges by shore, not a forecast — real counts move with the season and the weather. The point is that off-days are frequent and worth planning for.

Calm morning → point guests out

Beaches, gear, tours, cabanas. The day is theirs — and Stay-Close steps back.

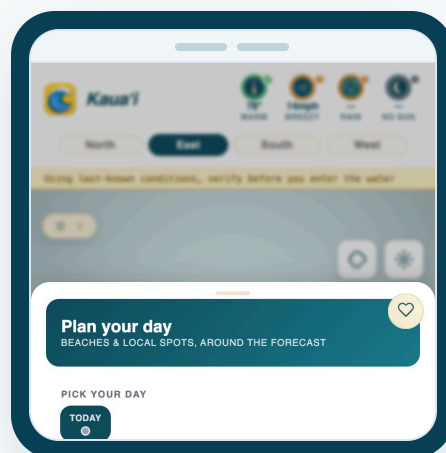

High surf + brown water → point guests in

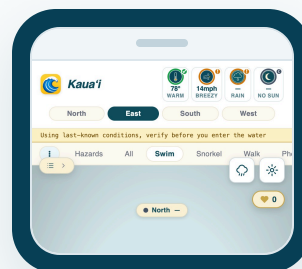

Spa, a long lunch, the pool bar, an indoor activity. The first thing they see is on your property.

Information, not advice. OceanSafe surfaces conditions and steers guests toward good options for the day. It does not certify that any beach is safe, and it always defers to lifeguards, posted flags, and official advisories.

The Stay-Close panel, surfacing your property's on-property options on a trigger day.

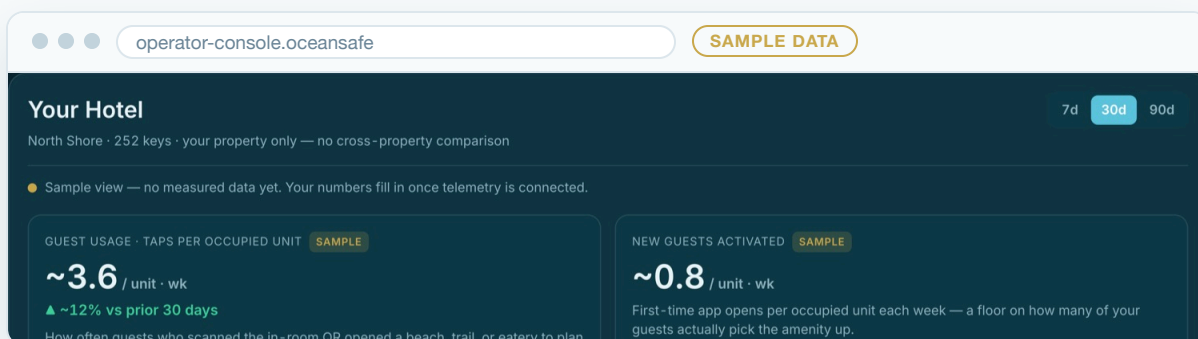

Beach detail with a live high-hazard warning.

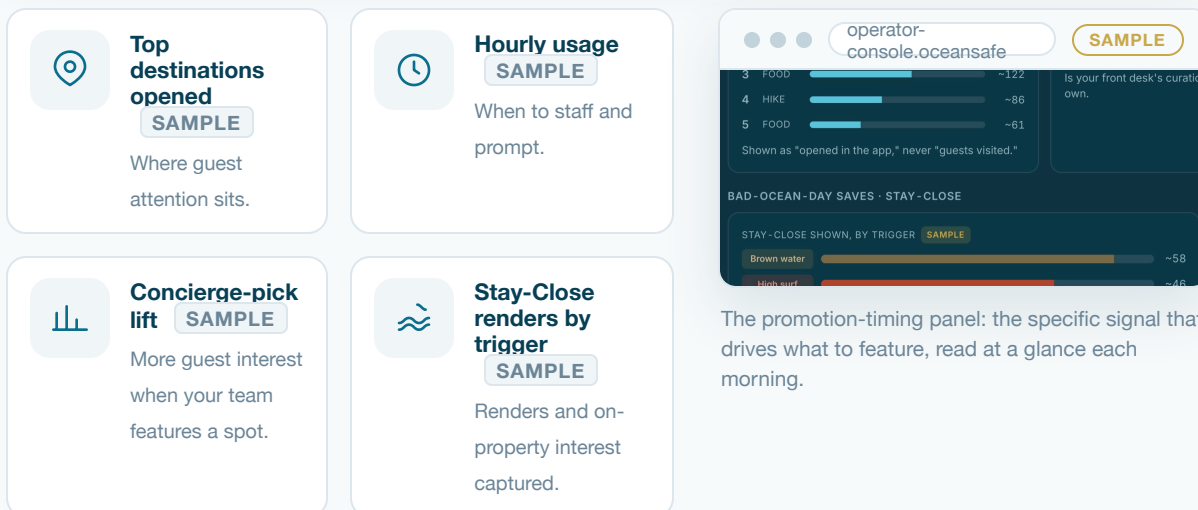

WHEN TO PROMOTE WHAT

The same data tells you when to promote what

Every property gets a private operator dashboard. It pairs the conditions read with how guests use the guide, so "what should we feature today" stops being a guess — spa and dining on high-surf and brown-water days, beach gear and cabanas on calm ones. A promotion calendar written by the weather, read at a glance each morning.

Your private operator dashboard for your property. Every figure shown is Sample data for illustration.

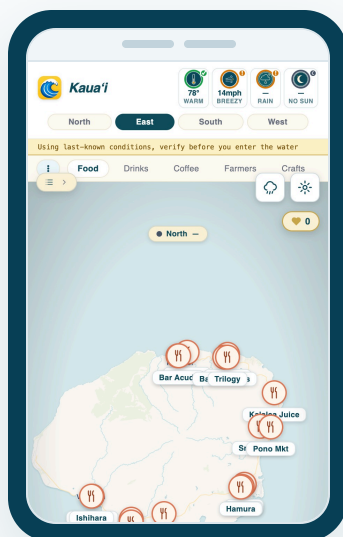

The promotion-timing panel: the specific signal that drives what to feature, read at a glance each morning.

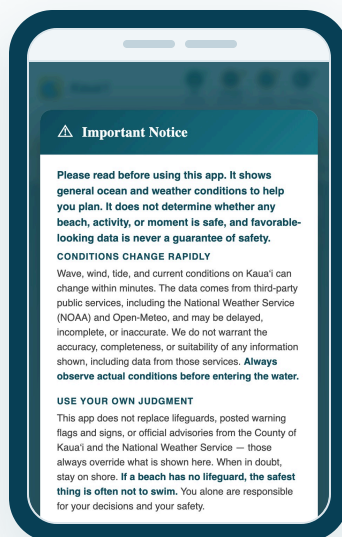

Read it as guidance, not a guarantee. Every number here is labeled **Sample**. A tap means **interest** — a guest opened something in the app; it is never a booking.

THE WHOLE PACKAGE

Everything included, nothing to build

Town & eats tab, co-branded for your property.

The in-app guest safety notice.

Co-branded guest app

Beaches, hazards, trails, eats and a trip planner, opened by an in-room QR code.

High-hazard warnings

Clear alerts on flagged beaches when conditions turn dangerous.

Private operator dashboard

Guest usage, safety-notice status (whether the guest safety notice is displaying), and promotion-timing signals for your property.

Guest safety notice

A plain disclaimer that shares information and defers to lifeguards and official advisories.

Live conditions feed

Surf and hazard readings that refresh roughly every 30 minutes.

Stay-Close panel

On bad-ocean days, the guide surfaces what is open and good on your property.

In-room placards + print pack

QR placards and print-ready materials, co-branded and ready to place.

Zero IT lift

No install, no SDK, no PMS integration, nothing for your team to run.

Everything above is included in the co-branded guide and the private dashboard — set up by us, placed by you. The pilot is the full product, not a trimmed-down demo.

THE PILOT & NEXT STEP

Your 30-day trial is completely free

See it live in your rooms for a full month — completely free. No cost, no card, no catch, no obligation to continue. We co-brand the guide for your property, hand you the placards and print pack, and turn on your dashboard. You place the placards. That is the whole setup.

We co-brand it

Your name alongside ours.

We send placards

QR placards + print pack.

You place them

Set them out in the rooms.

- ✓ Completely free
- ✓ No catch, no obligation
- ✓ Zero IT lift

- ✓ No card, no charge
- ✓ Cancel anytime
- ✓ Information, not advice

Start your pilot

Reply to this brochure, or reach out and we'll have your co-branded guide ready within days.
