

OCEANSAFE FOR RETAIL

Your Store × OceanSafe

The free beach-safety guide Hawai'i
visitors open before the water — carried
by the store right by the beach.

For retail & convenience operators with stores in Hawai'i.

WHAT OCEANSAFE IS

The screen built for the pre-beach check

Visitors open **oceansafety.app** to see today's surf, wind, UV index, rain radar, and hazard warnings for the beach they're headed to — a free utility, not a brochure, made to be worth opening in the moments right before people head to the water. It's **live on Kaua'i today** and building out island by island, toward where your stores already are.

Two taps flip the map between conditions — surf, wind, UV, rain. It's the tool a visitor checks each morning of the trip, before deciding where to go and what to bring.

**Live surf, wind & UV****12-hour rain radar****Hazards, beach by beach**

Free for visitors, always. Live on Kaua'i today; O'ahu, Maui, and Hawai'i Island are in build. Sample screen; conditions vary by day. The value to you is the placement, not a traffic number — we don't publish counts we can't source.

THE FIT

The beach stop visitors reach for first

Your stores are where visitors buy sunscreen and beach gear minutes before the water. Sponsoring the guide ties your brand to the tool tourists check before they go, and it pairs naturally with the **reef-safe (mineral) sunscreen you likely already stock under Hawai'i law**. As the only brand in your category on the guide, you hold a spot a single shop can claim but only a multi-store operator can own.

Right moment

Pre-beach, where your stores already are — sunscreen and gear before the water.

Reef-safe story

Turn a legal requirement into a point-of-sale story you can tell.

Category exclusivity

The only brand in your category on the guide.

COVERAGE

Kaua'i · live

O'ahu · building

Maui · building

Hawai'i Island · building

On reef-safe: Hawai'i's ban on oxybenzone/octinoxate (2021) means you likely already stock mineral sunscreen to comply. We help you tell that as a story — not as a sustainability position you have publicly taken. Category exclusivity is a commitment we offer.

LIVE TODAY

Your own storefront inside the guide

Each location gets a co-branded page at oceansafety.app/p/your-store, carrying the same free guide with your branding — and the right item surfaces for the day: reef-safe SPF when the UV is high, a snorkel set on calm water.

Clean, on-brand, and tuned to conditions from the same live data on the beach pages — so guests reach for your store exactly when they need what's on the shelf.

- ✓ **Live today** · co-branded page + free guide, per store
- ✓ **Live today** · conditions-tuned product tags
- ✓ **Live today** · promotions + aggregate analytics

Sample screen — your co-branded storefront. Checkout is provisioned per store at onboarding.

One page per store, chain-wide. Every location gets its own storefront — new stores drop in the day they open.

FOOT TRAFFIC

The nearest beach stop is yours

Every visitor checking the guide is minutes from one of your stores. The app shows them the **nearest one — walking time and one-tap directions** — so the pre-beach “I need sunscreen” becomes a walk through your door. You’re closer to the beach than anyone; the guide makes sure they know it.

Nearest store, ranked

The closest location surfaces first, by walking distance.

One-tap directions

Straight to your door — no searching, no friction.

In your aisle in minutes

Online browsing becomes a real, in-store visit.

Physical foot traffic, not just clicks. The one thing a store chain wants most — more people walking in — is what being closest to the beach delivers.

Live today: the guide surfaces the nearest partner store with walking directions on every beach page. Sample screen; distances are illustrative.

LIVE TODAY

A QR on every receipt and counter

Every receipt and counter card carries a QR to the live guide and your reef-safe picks — **printed straight from your existing registers**. It turns a routine purchase into a reason to open the app, and a reason to come back to your store before the trip ends.

On the receipt
Prints from your POS —
no new hardware

Counter card
Co-branded, shipped
per store

In the storefront
One tap to today's picks

Straightforward to run: the receipt QR is a static code per store — it prints from your existing registers with no new hardware. Sample receipt shown; the guest lands on that store's co-branded page.

NO RIP-AND-REPLACE

It works with the POS you already run

OceanSafe fits **alongside** your point-of-sale, not on top of it. On day one it works with **any POS** — we import your catalog from a simple spreadsheet and send every pickup order straight to you. Where your POS has an open connection — **Square, Shopify, Clover, Lightspeed** and more — we set up a live catalog-and-order sync. Your registers don't change, and the card for an app sale never runs on your POS.

STEP 1

Your catalog goes in

Items, prices, and photos — from a spreadsheet export, or a live sync where your POS has an open API.

STEP 2

It stocks the app storefront

Your goods appear on the co-branded page — no re-keying.

STEP 3

Orders come back to you

Each pickup order lands at the right store — printable slip, email, or text.

WORKS WITH

Any POS · day one

Square

Shopify

Clover

Lightspeed

Toast

Heartland

LOC

NCR

Oracle

LIVE SYNC WHERE YOUR POS HAS AN OPEN API — A SPREADSHEET FOR EVERYTHING ELSE

Honest on how it connects: day one, your catalog goes in by spreadsheet and each pickup order arrives as a printable slip, email, or text — that works with **any POS**, nothing to install. Live catalog-and-order sync is set up on request where your POS has an open API (Square is the rail our in-app checkout already runs on; Clover, Shopify, Lightspeed and enterprise systems like LOC, NCR, and Oracle connect through their own setup). Payment is handled securely in the app and **settles to you** — we never run the sale on your own register.

FOR YOUR MARKETING TEAM

Demand, tied to the weather

A retail operator rarely gets to see *why* demand moves. OceanSafe ties beach intent and the day's weather to product categories across every one of your stores — the layer of consumer insight a physical retailer can't assemble on its own. Aggregate and privacy-safe: trends and categories, never individual visitors.

- ✓ **What sells with the weather** — high UV → SPF, rain → ponchos, calm → snorkel
- ✓ **Which beaches feed which stores**, and which stores are busiest, cross-island
- ✓ **Top categories planned-for**, rolled up across the whole chain

Sample dashboard — illustrative data. The real dashboard is in build; this shows what your marketing team would work in. Always aggregate and privacy-safe — counts of what visitors browse and plan, never who they are.

FOR YOUR MARKETING TEAM

The data your marketing team lives in

The deeper view, built for marketers: a **guide→pickup funnel**, **12-week category trends**, your **feeder markets**, a **beach×category heatmap**, **bought-together** pairs, and a **7-day demand forecast** — all aggregate and privacy-safe.

Sample dashboard — illustrative data. The real board is in build; this is the range of views your marketing team would work in. Everything stays aggregate — funnels, trends, and segments, never an individual visitor.

FOR YOUR MARKETING TEAM

Promotions timed for max conversion

Turn the same live conditions into a promotion — and **time it right**. The data shows when your beach-goers are planning their day, so the offer lands right on the guide they're already looking at, at the moment it matters most.

What the guest sees — the offer pops up on the app they already opened.

- ✓ **Timed** — push when demand peaks, not whenever
- ✓ **Condition-triggered** — high UV → SPF, rain → ponchos
- ✓ **Targeted** by store or region

Sample screens. Promotions on the storefront + guide are on the near roadmap; the co-branded page and analytics are live today. Illustrative timing data — no performance numbers implied.

FOR YOUR STORES

What to stock, store by store

The same signal becomes a simple daily nudge for each store — the app flags what tomorrow's ocean will drive, so shelves get stocked before they empty, not after.

Rain til 2p
Po'ipū — feature tomorrow

- Ponchos & umbrellas
- Reef shoes & dry bags

UV 11
Waikīkī — feature today

- Reef-safe sunscreen
- Rash guards & hats

i **Coming soon.** Foot-traffic-by-condition and seasonal stocking guidance are roadmap capabilities that grow with adoption. Sample nudge shown — illustrative, no performance numbers.

MORE THAN BEACH GEAR

Route the beach moment into your best aisles

The pre-beach shopper isn't only buying sunscreen. The same conditions that sell SPF also move **cold drinks, grab-and-go food, coffee, and souvenirs** — your higher-margin lines. OceanSafe surfaces the right aisle for the day, so a \$15 sunscreen run turns into a full basket.

**Reef-safe SPF & sun**

High-UV mornings — the reason they open the app.

**Cold drinks & water**

Every hot beach day — high-margin, high-repeat.

**Coffee & grab-and-go**

Rainy or early starts — when the beach is out.

**Souvenirs & gifts**

The last-day beach run — before they fly home.

A \$15 run becomes a \$40 basket. The app suggests the add-ons the day is already selling — cold drinks on a hot morning, coffee and snacks when it rains.

Weather-routed, aisle by aisle: the same conditions that pick the sunscreen pick the cross-sell. Illustrative examples — no performance numbers.

THE CREATIVE

Nothing lands on your team's plate

OceanSafe produces the finished co-branded creative, so you get social-ready assets with no production burden — including a **sample animated 1:1 ad we'll customize with your branding**, plus counter cards, storefront design, and shelf pairings for the reef-safe story.

Check today's conditions

Know before you go

Sample animated ad — a ~12-second loop for Instagram & Facebook, shipped as **.mp4** and **.gif**. We swap in your branding.

IN THE KIT TODAY

- ✓ Printed QR counter cards & a counter standee
- ✓ Co-branded storefront design + receipt QR artwork
- ✓ Staff one-pager & monthly aggregate analytics summary

ROLLING OUT

- ✓ Per-store automated ad + social tiles at scale
- ✓ Reef-safe shelf talkers & window clings
- ✓ Email & newsletter banners

WHAT IT COSTS

Free to start. Flat when you scale.

Two ways in — and neither runs away with your sales. **Free** costs nothing: we take a small **3% only on what the app sells** for you. **Paid** is a flat **\$500 per store** — keep 100% of every sale, plus the full data layer. The busier you get, the more that flat becomes your cap.

FREE**\$0**/mo**+ 3% on app sales · keep the rest**

- ✓ Co-branded storefront + the free guide
- ✓ Receipt & counter QR codes
- ✓ Basic promotions
- ✓ A monthly demand snapshot

PAID**\$500**/store/mo**0% · keep 100% of every sale**

- ✓ Everything in Free
- ✓ The full data layer & market intelligence
- ✓ Advanced, timed promotions
- ✓ Multi-store rollups

Your cost is capped. On Free the 3% never has to top the \$500 flat — the day it would, move to Paid and keep 100%. You'll never pay more than \$500 per store.

Start where you like: run on Free as long as you want — and your first month on Paid is on us. No lock-in; upgrade only when the data earns it.

NEXT STEP

Start a free 1-month pilot

The clean way in is a small pilot — a Kaua'i cluster to start — live and **completely free for a month**, so you see the storefront, the receipt QR, and the data layer working before any commitment. We provision each store, ship the QR cards, and stand it up. From there, you decide where to grow.

STEP 1

Pick a pilot cluster

A handful of stores on a single island, to start.

STEP 2

We provision, free

Storefronts up, QR cards shipped, data layer on — no cost.

STEP 3

Run it a month

See it working, then decide.

STEP 4

Expand by island

New stores drop in as each island comes online.

Account support included: a named account contact and a quarterly business review come with the relationship. We'll confirm the exact store list with your team before the pilot is finalized.

Let's scope a free pilot

A few stores, live and free for a month, before any commitment — and you see it working first.
