

OceanSafe for [Your Hotel]

A free, co-branded beach-safety and conditions guide for your guests — opened from a QR code in the room. No app to download, nothing for your team to install.

Information, not advice

Free for 30 days

WHAT IT IS

One screen shows how the day looks

A co-branded web guide your guests open from an in-room QR code — no app, nothing for your team to run. It reads your shore's real conditions and shows them two ways.

Swell & surf overlay — surf height by shore, East running 6+ ft here. Sample screen.

12-hour rain overlay — rain turns water brown and trails muddy. Sample screen.

Two taps switch the overlay — **swell & surf**, or the 12-hour **rain** that turns clear water brown; both refresh about every 30 minutes. The same read that keeps a guest safe tells your team how the day will go:

✓ Calm → point guests out

Beaches, gear, tours, cabanas. The day is theirs.

≈ Rough → point guests in

Spa, a long lunch, the pool bar, an indoor activity — the first thing they see is on your property.

THE CONDITIONS CALENDAR

The ocean has an off-switch

OceanSafe reads the real conditions along your shore — surf height, wind, rain, brown-water runoff from USGS stream gauges, and UV — refreshed roughly every 30 minutes. From that it counts **trigger days**: the days when the water is simply the wrong call for most guests. They are not rare, and they are not random.

A typical year on a north-facing shore

Illustrative year · not measured

Trigger days per month on a north-facing shore — clustered in winter, when big swells and runoff stack up. Illustrative, not a measured count.

~110/yr

North Shore

Big winter swell and frequent runoff.

60–80/yr

South Shore

Summer south swells and afternoon wind.

50–70/yr

East Side

Trade-wind chop and brown water after rain.

Illustrative typical ranges by shore — modeled, not a measured count or a forecast. Real off-days move with the season and the weather; the point is they are frequent and worth planning for.

What a guest sees on a trigger day — your spa, dining and cabana surfaced beside the conditions, never on top of the safety verdict. Sample screen.

Information, not advice. OceanSafe surfaces conditions and steers guests toward good options for the day. It does not certify that any beach is safe, and it always defers to lifeguards, posted flags, and official advisories.

YOUR PROMOTIONS

Drag your flyer in. Your guests see it.

You already make promotions — the spa special, the sunset luau, tonight's cabana rate. Getting them in front of a guest usually means a lobby easel and hope. Here it is one motion: drop your promo PDF onto the guide and it lands in the tab your guests already open. No design ticket, no reprint, no app store. Pull it down just as fast when the run is over.

Your offer shows up next to the surf — and the surf still tells the truth. First-time listings get a quick OceanSafe review, and a portrait flyer is cropped to a clean card so it sits well on a phone. Sample screens.

 **A promotion never changes what a beach reads.** Your offer appears beside the conditions, never inside them — a property cannot pay to look safer. The safety verdict takes zero input from any promotion.

THE PROMOTION CLOCK

The same data tells you when to promote what

Your guests plan their day inside the guide — about **180 sessions a day**, peaking Saturday. Lay *when* they're planning over *when* each offer actually gets tapped, and a promotion clock falls out: land your pop-up in a window your guests are already in. A tap is interest, never a booking — but it tells you the hour to ask.

The best time to show a promotion pop-up

SAMPLE

Cabana at 9am, spa at 2pm, luau & activity desk at 8pm — each lands where an offer guests already reach for meets a window they're already in. Beach bar peaks at 4pm, just outside those windows: a nudge worth testing, not a sure thing. AGGREGATE COUNTS · NO INDIVIDUAL TRACKING · SAMPLE DATA

A promotion never changes what a beach reads. Your offer appears beside the conditions, never inside them — a property cannot pay to look safer. The safety verdict takes zero input from any promotion.

When guests are in the guide

SAMPLE

Three moments carry the day — tallest single hour is 8am. A pop-up only needs to land in one of them.

Offers guests actually tap

SAMPLE

Each offer with its own busiest hour — the promo clock is this list, read back by time of day.

THE WEATHER LEVER & THE PLAY

A schedule the weather writes for you

Two more reads turn timing into a plan: when the ocean has an off-switch, more guests are on-property with time to spend — and you already know which shores they're pointed at.

Staying close · calm vs high-surf day

[SAMPLE](#)

38%

Calm day

71%

High-surf day

Share of in-app planning pointed **within ~10 min** of the property. On high-surf days it jumps 38% → 71% — a promote-indoor signal you can see a day early.

Beaches your guests check most

[SAMPLE](#)

Where guests are pointed before they leave the lobby — so offers and shuttle timing follow real demand.

🕒 **Spa at 2pm, cabanas at 9am, beach bar at 4pm, luau & activity desk at 8pm** — each promo lined up with a labeled peak instead of the marketing calendar. [SAMPLE](#)

🕒 **On a slow-surf forecast, move offers indoors a day early** — lead with spa, on-site dining and cabanas over the open-water tour. [SAMPLE](#)

🕒 **Point staff and stock at Po'ipū and Brennecke's** — the shores your guests check most, so a same-day offer or shuttle earns its keep. [SAMPLE](#)

Aggregate counts only — no individual tracking. A tap is interest, never a booking; the pilot measures this property's real numbers.

THE WHOLE PACKAGE

Everything included, nothing to build

**Co-branded guest app**

Beaches, hazards, trails, eats and a trip planner, opened by an in-room QR code.

**High-hazard warnings**

Clear alerts on flagged beaches when conditions turn dangerous.

**Private operator dashboard**

Guest usage, safety-notice status (whether the guest safety notice is displaying), and promotion-timing signals for your property.

**Guest safety notice**

A plain disclaimer that shares information and defers to lifeguards and official advisories.

**Live conditions feed**

Surf and hazard readings that refresh roughly every 30 minutes.

**Stay-Close panel**

On bad-ocean days, the guide surfaces what is open and good on your property.

**Digital QR codes + print-ready art**

Co-branded QR codes and print-ready files — place or print them wherever you like. Nothing physical to ship.

**Zero IT lift**

No install, no SDK, no PMS integration, nothing for your team to run.

Everything above is included, delivered as digital assets — set up by us, placed by you. The free 30-day trial is the full product, not a trimmed-down demo.
